

# Chipboard Pads

Chipboard pads can be used for lightweight protection across a **wide range of shipping and packaging applications**. They're commonly used as envelope stiffeners, **helping to prevent bending and creasing** of important documents and photos during transit. Made with durable kraft fiberboard, these pads can also be used as the top layer inside a carton to **shield contents from damage** when opening said cartons. This simple yet effective package reinforcement is sold in case quantities.
