

# Void Fill

---

Void fill materials, such as paper and bubble wrap, are critical elements of the packaging industry. Paper void fill, such as newsprint or kraft paper, tend to be more cost-effective and eco-friendly compared to its bubble counterparts. Bubble, on the other hand, offers superior protection for fragile items with its shock absorbent nature. Whether you use paper or bubble, void fill will adapt to any container, providing tailored cushioning stability during transport.
